## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach, disclose, or suggest the claimed limitations of (in combination with all other limitations in the claim), a method for printing a job at a printing machine located remotely from a transmitting job originating station which includes a control subsystem and a document generating subsystem having a user interface for inputting job control instructions for a print job by a ticket which includes a set of job execution attributes, each job execution attribute being associated with a programmable set of information for defining the corresponding job execution attribute, a first one of the programmable sets of information instructing the transmission job originating station as to a manner in which the transmitting job originating station is to generate job status information, and a second one of the programmable sets of information listing one or more confirmation destinations, with each confirmation destination being disposed remotely of the transmission job originating station, and including an information receiving subsystem wherein, in response to processing at least a portion of the image data in accordance with the job ticket, reading the second set of programmable information with the transmission job originating station for determining each confirmation destination to which the job status information is to be transmitted as claimed in claim 1. Similar features are claimed in claims 6, 11, 12, 14 and 16. Therefore, claims 6, 11, 12, 14 and 16 are allowable over the prior art of record for the same reasons.
2. It follows that claims 2-5, 7-10, 13, 15 and 17 are then inherently allowable for depending on an allowable base claim.
